Scraping Machine
Model SP 60J for back Bones
Scraping Machine
Model SP 60J for back Bones

The SP 60J is designed to scrape off the salmon back bones.

The machine makes it possible to save labour cost and still obtain an even higher yield in the salmon production.

PRODUCT INFORMATION
Due to the increased focus of maximizing yield in the salmon industry, and upon our customers requests UNI-FOOD TECHNIC A/S has developed the new SP 60J for scraping off salmon back bones.

ADVANTAGE
- Possibility of making a high-end byproduct
- The texture of the meat will not change
- The operating costs will be reduced
- The machine is built in the well known UFT quality
- The machine is easy to clean

TECHNICAL DATA
Operators: 1 person
Capacity: 10-16 bones/min (*)
Fish size: 2-7 kg (**) (**) Yield depends on how efficient the operator is.
Pneumatic connection: 1/2”
Pneumatic consumption: 14—22 l/min at 6 bar
Water connection: 1/2”
Water consumption: 0-10 l/min (***) (*** Water for the operator)
Power connection: 1 x 400V/230V + PE - 6A
Power consumption: 1 KW
Weight: Approx. 320 kg

* Capacity depends on how efficient the operator is.
** Yield depends on the on the operational setup, as well as the quality and nature of the fish.
*** Water for the operator.
